

SWITCH SOLUTIONS FOR METERING APPLICATIONS

Metering

In addition to recording energy usage, modern utility meters also act as communication hubs between the customer and utility - communicating usage patterns, billing history, and pricing information which indicate the best time of day to operate energy intensive devices. These meters must be able to resist tampering as well as endure a variety of challenging environmental conditions for many years.

C&K products are among the highest performing switches in the world and were designed with these types of applications in mind. In addition to our standard portfolio, we can customized any switch to meet the most demanding requirements of our customers.

- Tamper prevention
- Display activation
- Reset functions
- Open valve button
- Communication
